

USER ACCEPTANCE TESTING (UAT) TEMPLATE

Date	30-09-2026
Team ID	UNM1737WeatherVision
Project Name	AI-Weather Wise
Maximum Marks	—

Project Overview

Project Name	AI-Weather Wise
Project Description	A weather application that allows users to search for a location and view current weather information such as temperature, humidity, wind speed, weather condition and forecast details. AI-based features can provide simple weather insights and recommendations based on the displayed weather data.
Project Version	1.0
Testing Period	30-09-2026 to 30-09-2026

Testing Scope

- Location/city search and weather retrieval
- Current temperature and weather condition display
- Humidity, wind speed and other weather details
- Weather forecast display
- AI-generated weather summary/insight, where implemented
- Error handling for invalid or unavailable locations
- Responsive display and basic user interaction

Testing Environment

URL/Location	AI-Weather Wise Web Application / Localhost or deployed project URL
Credentials	Not required for normal weather search

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Search weather by valid city	1. Open application. 2. Enter a valid city. 3. Click Search.	Weather information for the selected city is displayed correctly.	Weather information is displayed for the selected city.	Pass
TC-002	Search with invalid city	1. Enter an invalid/non-existing city. 2. Click Search.	A clear error message is shown and the application does not crash.	Error message is displayed without crashing.	Pass
TC-003	Display current temperature	1. Search for a valid city. 2. Check temperature.	Current temperature is shown with the correct unit.	Temperature is displayed with the selected unit.	Pass
TC-004	Display weather details	1. Search for a valid city. 2. View humidity and wind details.	Humidity and wind information are displayed clearly.	Humidity and wind information are displayed.	Pass
TC-005	Display forecast	1. Search for a valid city. 2. View forecast section.	Available forecast information is displayed clearly.	Forecast information is displayed.	Pass
TC-006	AI weather insight	1. Search for a valid city. 2. View AI weather insight.	AI insight gives a simple summary based on available weather information.	AI weather insight is displayed.	Pass
TC-007	Empty search input	1. Leave city field empty. 2. Click Search.	The application asks the user to enter a location.	Validation message is displayed.	Pass
TC-008	Network/API failure handling	1. Attempt weather search when weather service is unavailable.	A user-friendly error message is shown and the interface remains usable.	Error message is shown and interface remains usable.	Pass

Bug Tracking

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Invalid location should show a clear message.	1. Enter invalid city. 2. Click Search.	Medium	Closed	Validation/error message is clear.
BG-002	Weather data may not load when weather API is unavailable.	1. Disable network/API access. 2. Search for a city.	High	Closed	User-friendly error handling is required.
BG-003	AI insight should not display unrelated information.	1. Search a city. 2. Check AI insight.	Medium	Closed	Insight should remain related to weather data.

Notes

- Ensure that all test cases cover both positive and negative scenarios.
- Test valid and invalid city searches and verify that errors are handled clearly.
- Check that weather values and forecast information are displayed correctly from the available weather data source.
- For AI weather insights, verify that the generated content is relevant to the displayed weather information.
- Bug tracking should include severity, status, and steps to reproduce.
- Obtain sign-off from the project manager and product owner before deployment.
