

Project Design Phase-II

Data Flow Diagram & User Stories

Date	29 September 2026
Team ID	UNM1737WeatherVision
Project Name	AI WeatherWise
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: (AI WeatherWise Simplified)

Data flow: User enters a location or weather request → AI WeatherWise sends the request to the Weather API → weather data is processed and stored → AI analysis prepares the forecast and useful insights → the dashboard displays current weather, forecast information and alerts to the user.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for AI WeatherWise by entering my email, password, and confirming my password.	I can access my account / weather dashboard.	High	Sprint-1
	Registration	USN-2	As a user, I will receive a confirmation email once I have registered for the application.	I can receive the confirmation email and click confirm.	High	Sprint-1
	Login	USN-3	As a user, I can log into AI WeatherWise by entering my email and password.	I can access the weather dashboard.	High	Sprint-1
	Weather Search	USN-4	As a user, I can search for weather information by entering a city or location.	I can view current weather and forecast information for the selected location.	High	Sprint-1
	Weather Dashboard	USN-5	As a user, I can view temperature, humidity, wind, rainfall and forecast details on the dashboard.	The dashboard displays the requested weather details clearly.	High	Sprint-1
	AI Weather Insights	USN-6	As a user, I can receive AI-based weather insights and a simple explanation of forecast conditions.	AI WeatherWise provides understandable weather insights based on available weather data.	High	Sprint-2
	Weather Alerts	USN-7	As a user, I can receive alerts for important weather conditions such as heavy rain, storms or extreme temperatures.	I receive an alert when the defined weather condition is detected.	High	Sprint-2
Customer (Web user)	Location & Forecast	USN-8	As a web user, I can select a location and view its current and upcoming weather forecast.	The selected location's forecast is displayed correctly.	Medium	Sprint-2
Customer Care Executive	User Support	USN-9	As a customer care executive, I can view user issues related to weather information or account access.	I can review the issue and provide support to the user.	Medium	Sprint-3
Administrator	System Management	USN-10	As an administrator, I can manage users, weather API settings and system information.	I can securely update required system settings and monitor the application.	High	Sprint-3
